Royal Meadows comprises a handful of distinct buildings, providing a host of 1-3 bedroom apartments, penthouses and 4 & 5 bedroom townhouses, with an attractive landscaped walkway running through the development, connecting Sciennes Road to the Meadows.

Each home exudes charm and elegance. Many of the beautifully restored apartments benefit from double height ceilings, mezzanine levels and balconies, designed to optimize natural light. Coupled with contemporary finishes and traditional features, the panoramic views of the city takes Royal Meadows to another level.

The 4 and 5 bedroom townhouses, set over three floors, offer exquisite family living with generous proportions. A SUSTAINABLE APPROACH

Our commitment to sustainability covers every aspect of our business. It means designing and building high-quality homes in thriving communities where our customers can enjoy a healthy, active and sustainable lifestyle.

We have designed our homes at Royal Meadows to be energy and resource efficient to live in by improving building performance whilst sensitively preserving the buildings' character.

Each unique property at Royal Meadows will be energy efficient, featuring new improved insulated building fabric and enhanced glazing performance. The development is completely gas free, and each home will be heated using air source heat pumps - a low-carbon heating solution which provides green energy and reduced pollution. Centralised mechanical ventilation systems allow fresh air to flow through the home, and special consideration has been given to maximise natural light, creating fantastic spaces to live, work and play.

We continue to work with our partners in the supply chain to source sustainable materials, and with our contractors to minimise the environmental impact of our construction sites. We aim to use recycled materials whenever possible and ensure our construction waste is re-used. Sandstone recovered from structural dismantlings has been re-used in the buildings and boundary walls, and any plasterboard waste has been crushed and reused as a soil conditioner.

Conscious of our impact on the local infrastructure networks, we have constructed surface water attenuation tanks to reduce the development's impact on the existing wider drainage network. We work with many small and medium sized (SME) businesses who provide labour, trades and services to our construction sites. Many of our partners are local and family-run businesses and working with them supports the local economy around our sites.
